ACKNOWLEDGEMENTS

I would like to extend my gratitude to the many people who helped to bring this research project to fruition. First, I would like to thank Professor Tamer El-Diraby for providing me the opportunity of taking part in Master of Applied Science program. I am so deeply grateful for his help, professionalism, valuable guidance and financial support throughout this project and through my entire program of study that I do not have enough words to express my deep and sincere appreciation.

I would also like to thank the experts who were involved in the validation survey for this research project: Mr. Hardy Wong, Professor Chris A. Kennedy, Mr. Craig Hubley, Mr. Andrew Colombo, Professor Mohamed lachemi, Ms. Halla Sahely, Mr. Yves Fillion, Mr. Carmelo Tancioco, Mr. Greg Bonser and Mr. Michae Jantzi. Without their passionate participation and input, the validation survey could not have been successfully conducted.

I would also like to acknowledge Professor Heather MacLean as the second reader of this thesis, and I am gratefully indebted to her for her very valuable comments on this thesis.

Many thanks to Professor Brenda McCabe for her concern and encouragement in the past years. My thanks also go to the entire population of GB 330 and GB 332 for their numerous conversations, questions and help.

Finally, I must express my very profound gratitude to my parents and to my husband for providing me with unfailing support and continuous encouragement throughout my years of study and through the process of researching and writing this thesis. This accomplishment would not have been possible without them. Thank you.
